Chasing Space: An Astronaut's Story Of Grit, Grace, And Second Chances

Synopsis

Leland Melvin is the only person in human history to catch a pass in the National Football League and in space. Though his path from the gridiron to the heavens was riddled with setbacks and injury, Leland persevered to reach the stars. While training with NASA, Melvin suffered a severe injury that left him deaf. Leland was relegated to earthbound assignments, but chose to remain and support his astronaut family. His loyalty paid off. Recovering partial hearing, he earned his eligibility for space travel. He served as mission specialist for two flights aboard the shuttle Atlantis, working on the International Space Station. In this inspirational memoir, the former NASA astronaut and professional athlete offers an examination of the intersecting role of community, perseverance, and grace that align to shape our opportunities and outcomes. *Chasing Space* is not the story of one man, but the story of many men, women, scientists, and mentors who helped him defy the odds and live out an uncommon destiny. As a chemist, athlete, engineer, and space traveler, Leland's life story is a study in the science of achievement. His personal insights illuminate how grit and grace are the keys to overcoming adversity and rising to success.

Customer Reviews

“Though Melvin refers to his story as one of grit and grace, he does so without a shred of ego. Second chances played a key role in Melvin's ability to overcome obstacles and achieve his many dreams, and he'll have readers wondering how many chances it would take them to do the same. (Booklist) “For someone of such remarkable

achievement, Melvin demonstrates impressive humility and depth of character as he discusses overcoming myriad setbacks. Melvin writes honestly about his mistakes as well as his triumphs, urging readers to pursue their dreams with determination and hard work. (Publishers Weekly (starred review)) "A story of passion and perseverance told by a humble hero. Insightful and inspiring!" (Angela Duckworth, New York Times bestselling author of Grit) "Leland's story moves fast from the deck of his home-built skateboard to the flight deck of the space shuttle. He shows us how he made the best of every opportunity and every setback on his way from his hometown to outer space. It moves fast; once you get started you'll want to join the chase." (Bill Nye, CEO, The Planetary Society) "Henry Ford said, If you think you can or you think you can't, you're right. Leland Melvin proves it. His story inspires me and reminds me of the value of staying positive and pushing through adversity. Chasing Space is uplifting and motivating." (Simon Sinek, Optimist and author of Start with Why and Leaders Eat Last) "Leland has helped me connect to the Universe I searched for so long since being a kid. From being obsessed with the TV series In Search Of to discovering Carl Sagan's world, space always fascinated me. Meeting Leland allowed me to connect even deeper into the cosmos on so many levels. In 2009 Leland took one of my BBC tees to space as well as a piece of music we worked on together, which as you can imagine meant a lot to me. He also introduced me to Katherine Johnson and has worked closely with my mother on my charity to help further educate kids from my hometown. I'm happy to be able to call Leland a friend and looking forward to many more years of learning with him. And now he will take you, too, on a journey." (Pharrell Williams) "As a Black woman researcher at NASA in the 1950s, I found Chasing Space very revealing. While I performed the calculations that assisted men on their missions to the moon, I always hoped that in my lifetime that I would see a Black man fly into space. Not only did this book make me feel as if I were on this journey with Leland, through his eyes, it reminded me of how small the planet really is, and therefore, how insignificant our differences as humans are -the kind of issues that kept my own legacy at NASA hidden for so long. Chasing Space is a must read -a flight you shouldn't miss." (Katherine Johnson, former NASA physicist and mathematician, and recipient of the Presidential Medal of Freedom) "Nerd-kid almost burns down his house with a chemistry experiment gone bad, then grows up and plays for the National Football League, then flies to the International Space Station. That actually happened, and it is quite a story. In Chasing Space, Leland Melvin, the former NASA astronaut, shares this remarkable trajectory of his life. En route he tackles stupendous obstacles with dogged determination, showing you what is indeed possible in

life if you believe. (Neil deGrasse Tyson, Astrophysicist at the American Museum of Natural History and author of *Astrophysics for People in a Hurry*) --This text refers to an alternate Audio CD edition.

Leland Melvin is an engineer, NASA astronaut, and a former wide receiver for the Detroit Lions. He served on the Space Shuttle Atlantis as a mission specialist and was named the NASA Associate Administrator for Education in October 2010. He also served as the cochair on the White House's Federal Coordination in Science, Technology, Engineering, and Mathematics (STEM) Education Task Force, developing the nation's five-year STEM education plan. He is the host of the Lifetime show *Child Genius* and a judge for ABC's *Battlebots*. He holds four honorary doctorates, and has received the NFL Players Association Award of Excellence. He lives in Lynchburg, Virginia.

Really inspiring book and a great guy.

A quickly-paced memoir of an exceptional outlier with the unique ability to compartmentalize, set goals and rally people to help him achieve them. He has an uncanny knack for getting second chances under the most extraordinary circumstances and he capitalizes on them extremely well. The memoir contains great stories (some of them amusing) of perseverance and overcoming long odds. The final chapters seem a bit rushed compared to the leading chapters, perhaps because they're still unfolding. His stories demonstrate how a fierce work ethic and unflappable belief in oneself can propel you to the places you never imagined for yourself. I think the author does a remarkable job of presenting the power of positivity, while remaining detached from the outcomes.

Frankly, I had never previously heard of the author, but the book cover intrigued me so I decided to give this book a try. I'm so glad I did. As I live in northern Virginia, I was surprised to see we moved in the same geographical areas. Mr. Melvin's book is inspirational, informative and honest. Life often isn't an easy and straight , as is demonstrated in his memoir. As the mother of a biologist (and graduate of the University of Virginia) and an engineer who also dabbles in art, I admire Mr. Melvin in encouraging children to enter STEM/STEAM fields. As a retired federal employee myself, I admire that Mr. Melvin has found a fun and rewarding life in his "retirement". I certainly wish I had his energy! He is an inspiration to many young children, especially minority children. America needs more positive, honest and hard-working role models during this difficult time in our country's history.

A very easy read. As the title states, it traces the persistence and perseverance of the author. It shows more of the human side an astronaut, when so often they show the technical aspects what's needed to become one, Leland tells us about the struggles and personal challenges to achieve success (on anything he set his mind on doing)! Five

stars

Leland Melvin's readers will feel like passengers on his fascinating journey which starts out in his childhood neighborhood. This book skillfully weaves many themes and notable people, all of which are relevant to youngsters, educators, and parents. Leland Melvin bravely shares some personal experiences that make the reader feel more connected to the incredible story of his life. This book has a wide appeal--there is something for everybody in it. You will not be disappointed, and you might just learn a thing or two.

An excellent look at how setbacks can turn into success in people's lives if they continue to work hard and dream. Leland Melvin's life is an inspiration to all, no matter what their age. His experiences and mentors at the University of Richmond are especially noteworthy.

Astronauts are people too. Leland really opens his life's stories and shows the real kid growing up, getting educated, being successful, becoming an NFL player, Scientist, and Astronaut! I really enjoyed following him through his life. Excellent book.

Great read, overcoming adversity to reach for the stars!!
