Customer Reviews

This is a very good book for any Neurology course. I had to get it for my Medical School Neurology class and it was a great supplement to the lecture material. The information is concise and organized in a way that makes the material easier to learn and understand. I am definitely going to return to this book when studying for my board exams so I would recommend it.

This book is full of details that I had not seen anywhere else previously. It covers briefly pathologies, diagnostic tests/studies and management of several diseases. It also contains questions to help retain and review information covered in the text. There are a few errors (spelling, etc) but overall, it's a useful book. The book arrived in an envelope lined with bubble wrap; only a small blemish was found on the posterior cover. I'm generally satisfied with my purchase.

It is a complete textbook if you are studying for the neuro shelf, for example. It has all the information that you need to cover all your bases. However, I have used First Aid for most of the other clerkships and I got that book because the 1st Aid for Neuro was way out of date. I used this book and Pre-Test Neurology (not Pre-Test Neuroscience) and I felt ready for the exam.

Again, recommended by most students in previous classes for studying for the neurology shelf. Really helped me out with doing good neurology work-ups and write-ups. Helped me to impress my preceptors. Nice and thin, easy to get through. Has good practice questions, which is good, because there really are not enough on UWorld.

Very thorough - make sure you have lots of time to read this book. Not a quick read, very detail oriented.

very good review

Blueprints is always a good summary text. It covers the basics of the field, and should be part of your armamentarium when rotating through neurology. The practice questions at the end of each chapter are sparse, but helpful.

I used this for my 3rd year medical school neurology clerkship, and I wouldn't use it again. I thought the text part of the chapters was too basic, without much information on treatment (for example, meningitis description didn't say which abx to use) or next best step, which is important for the shelf. As for the tables - too much information! It's hard to read a table, especially when the table has every conceivable developmental milestone or neuromuscular problem. I thought case files was much more readable, although case files leaves out some of the zebras that are included in blueprints' many, many tables. If you want good questions - USMLE world and pretest are awesome! The blueprints questions are good, but you don't really need them if you've already got a collective 645 questions on world and pretest.
