Customer Reviews

The Complete SIFT Study Guide is a comprehensive and informative study guide meant to master Selection Instrument for Flight Training exam. The problem with SIFT is that in your entire lifetime you are just allowed to sit for SIFT for a couple of times. Hence, a person passionate to qualify for SIFT need to be fully prepared and updated on the exam. The advantage with The Complete SIFT Study Guide is that it is cheaper and yet filled with just meaningful content and information that saves student's time and yet prepares the students in a complete manner. The book focus on each section of the test individually and provides both questions and answers. The author Michael Clark

also shares many insights and provide highly meaningful information related to the exam. For example Simple Drawings consist of 100 questions which need to be answered in just 120 seconds. Many students may give little stress to this part of the exam as they get confident by the simplicity of the Simple Drawings. But, Michael states that the students need to train their brain to become accustomed to rapidly processing and selecting visual information.

I recently got this book for my father since he was going to retake the SIFT test soon and needed an up to date training manual that wouldn't overwhelm him with information about things he wouldn't need. His opinion on this book is this: the Hidden Pictures, Simple Drawings and the AAIT (Army Aviation Information Test) are pretty standard and are free of glaring errors. The section that test the flight knowledge (you see a view from the cockpit) were a bit hard to make out sometimes. He said the information section on the individual helicopters and differences between fixed wings and rotating ones was a very good refresher. Also included is a test for math skills, reading and mechanical comprehension tests. One thing on the wish list: Include another practice test for all sections in the book. This book really only explains each section before giving you a practice and then moving on. Another sample test would truly enhance this book much more than it already is.

I liked this book, I am not a pilot or a pilot student. But I would like to go to aviation school. So I bought this book and I must say that although I am a beginner, it was easy to understand everything that is explained in this book. Everything is explained in didactic way, uses many illustrations to show the information. I think it is interesting to know the operation of the helicopters and how they are piloted. All the functions of the cabin and the controls are explained in this book. I liked it a lot and it helped me to understand many things I did not know.

For anybody planning to sit the SIFT exam, this book is certainly a good idea. It's coherent and to the point, telling you exactly what information you are going to need and providing no shortage of examples along the way. The book also has the advantage of being inexpensive, so you could easily use it for the information it offers, in conjunction with other guides. If nothing else, it is a great resource to take with you and brush up on the information that you need.

Let's be clear - the Selection Instrument for Flight Training (SIFT) score is your ticket to the next stage of Army Aviation training. You are allowed to take the SIFT test only twice -

that it is. No further chances. So you better get it right as soon as you can. This was a book for my partner, but I was glad to see if I could help in the preparation as much as possible. So this book was more than helpful. Written with clear experience in the subject, it gives more than just simple tips to improve your SIFT score. Written in a clear yet technically accurate fashion, it strikes just the right balance. This book has been very helpful and insightful in this sense and has given us much to think about.

This book is riddled with grammatical errors and nonsensical statements in the reading comprehension section. I suspect English is not the author's first language and it is evident in the very first question. The Spatial Apperception section contains hideously blurred and condensed representations that make it difficult at times to ascertain which direction the helicopter is oriented. The entire book is filled with errors and it's evident the author and/or editor are not aviators. The Barron's book in comparison makes this study guide irrelevant and a complete waste of money.

Eh. I expected some sample questions but this book is really not terribly helpful. Look elsewhere.

This is completely unacceptable! I have no idea how this product passed through a publishing agency much less got good reviews. Everyone who put a good review must have not used the book. There are at least TWO mistakes in the math practice test and there are only 20 questions?!?!? Could you not ask an elementary school kid to check the work for you Mr. Clark?!?!? In addition, the Spatial Appreciation section had pictures so blurred you couldn't even tell what direction the helo was pointing. Finally, numerous grammatical errors of the type that would have been caught if someone would have just read through it. I was really relying on this book to help me with something extremely important to the rest of my life. It's not just about 22 bucks. Mr. Clark, you and your publishing house should seriously be ashamed of yourself. This is disgusting
