Hearing Conservation: In Occupational, Recreational, Educational, And Home Settings

Synopsis

This is a book that will be of great service to practitioners involved in developing, implementing, and maintaining hearing conservation programs. -- Canadian Hearing Report According to the National Institutes of Occupational Safety and Health, approximately 30 million employees are exposed to dangerous noise levels at work and an additional nine million workers are at risk for hearing loss from other ototoxins such as metals and solvents. Millions of children and young adults are also at risk for noise-induced hearing loss in non-occupational settings. Hearing Conservation: In Occupational, Recreational, Education, and Home Settings is the most current text to cover all major topics related to noise-induced hearing loss, including the military, construction, manufacturing, mining, transportation, the music industry, the home environment, education settings, and recreational arenas. From the underlying principles of hearing loss to audiometric testing procedures to assessment of hearing conservation programs, this book is packed with information for audiologists and other members of the interdisciplinary team who provide hearing conservation services for at-risk groups. Special Features: Many examples of audiometric data, that enhance understanding of all types of hearing impairment, test procedures, and standard threshold shift calculations Protocols for comprehensive audiological, tinnitus, and auditory processing evaluations Clinical pathways and follow-up action steps when a standard threshold shift is confirmed, including decisions about worker compensation in occupational settings Assessment of the effectiveness of a wide range of hearing conservation programs and correction of deficiencies, along with training, educational, and motivational techniques The most current information about hearing protection and enhancement devices, related regulations, selection and fitting, and training workers in how to use them for optimal results Comprehensive in scope, easily accessible, and useful to both clinicians and investigators, Hearing Conservation: In Occupational, Recreational, Education, and Home Settings is essential for audiologists, occupational hearing conservationists, otolaryngologists, internists, occupational nurses, noise control engineers, and any other practitioner who plays a role in developing, implementing, and maintaining hearing conservation measures. It is also an excellent text for graduate level audiology courses in hearing conservation.

Brand new just as described. Thanks!

I used it for class. I got the digital version. It doesn't have page numbers. Imagine my confusion when the professor gave assignments referencing specific pages... yeah, that wasn't cool. I had to text message my classmate and ask what chapter we were supposed to be using for the assignments, because the professor only told what page to look at. I think he was trying to be helpful, but with the digital kindle version not using the same page numbers as the actual book, it totally backfired. But hey, new technology... forget about it.
