Like previously reported by others this set is missing a lot of cards. Not only important combining forms, suffixes etc, but literally missing cards. Warning if you buy these you have to go through each

card one by one to see if you are missing any. My set was missing at least 2 cards (they are numbered). I thought I could still use them until even more turned up missing. Now apparently I am 9 days past the allowable return date!

The cards themselves are good quality. I like the way each card is hole punched and the cards come with two rings so the student can make easy-to-carry groups of cards to study. I could use more rings. I also like the booklet that comes with the cards. It contains an alphabetical list of all the flash cards, so it's easy to see what terms are included. As I pull a card from the box and add it to my study cards, I check it off the list in the booklet. I'm just beginning a medical terminology course, and these cards are useful. However, I immediately had to make my own flashcards for -blast, blast/o and xanth/o for which there are no flashcards in this substantial boxed set, as well as for many abbreviations. Be prepared to fill in the gaps.

For any nursing students struggling with the vocabulary of medicine, these will be very helpful for you. These cards are very well designed. They can be organized by body system, abbreviation, combining form, suffix, prefix, or any other combination that you may find helpful. They are numbered, color coded, and have easy to understand drawings and photographs. They also have holes punched through them and come with two rings, for portability and studying on the run, as most of us do. The box that they arrive in says that they are fun, effective, and portable. I fully agree that they are effective. These work as long as you work at it on a regular basis. Are they portable? It depends on your perspective. The box is very heavy if you plan on carting the whole set around at once. It is easier to just take out what you need and leave the rest at home. I certainly would not categorize these as fun, though.

WOW! I bought this based on all the wonderful reviews and so glad I did! I can grab any amount of them and stick them onto the rings that come with it and study anywhere. I love how the cards are numbered & grouped or you can mix them up. There are so many ways to study them. This is the only set I have found with the prefixes and suffixes all together in one box with pictures too to help associate. I definitely recommend them.

Great cards but some that I needed for my classes were not their. Don't know if there is a larger more complete set out there but if looking to buy I would certainly look.

My complaint is that 1/3 of the cards were stuck together and I ruined many of the ring holes trying to separate them. The online tools that are provided are not available on all devices so that was a terrible disappointment. Those issues aside, these are great learning tools for Medical Terminology. I gave it Two stars because my expectations are high for and the products I receive through their services. I was a bit let down this round.

These flashcards are the reason I passed this class. They are so convenient, and they have almost everything I needed for my final. The only problem I had with my set is that a lot of the cards were fused together and I had to take time to separate each one. But overall they were worth every penny

This made study a bit easier but i became overwhelmed with all the words. The only bad thing about them is a lot of the cards were stuck together and it eas hard putting them back in the box. I like that i can study on the go to and didnt need the cards.
