David Pratt is a construction cost consultant and quantity surveyor. He has taught courses in construction estimating and cost management at the Southern Alberta Institute of Technology (SAIT) and is a lecturer in construction costing at the University of Calgary. Mr. Pratt has been a long-time member of the Canadian Institute of Quantity Surveyors, and he holds degrees in quantity surveying from Liverpool College of Building and in economics from the University of Calgary.

It's a textbook...

Of the five leading textbooks on construction estimating, this one is easiest to read and comprehend and is very popular. It is a bit out of date and lacks a chapter on roofing which seems to be a major omission. It opens each chapter with "objectives" so that it is clear to the student what is to be learned from each chapter.

This book focuses more on the "principles" of construction estimating with emphasis on the admin/clerical aspects of it. Specific examples are few and far between. Dagostino/Figenbaum's book, on the other hand, is at the other end where they have lots of concrete examples and somewhat short on the admin/clerical stuff. If you are more the office type then buy Pratt's book. If you are more the field type/dissect the construction plans then the Dagostino/Figenbaum book will be better for you. Of course if you are the owner then you had better read both books to make sure your people are getting things right. Incomplete book so only three stars.

The book came with highlighter and the cover is a little bit damaged.

Good condition, serves the purpose.

Nice

The book arrived in good shape. Would definitely rent any other book I need.

great
